

DecodeLabs Project 2 — Exploratory Data Analysis

Objective: Analyze the dataset to understand patterns, trends, distributions, and outliers.

Dataset size: 1200 rows × 14 columns.

Basic Statistics

Column	Count	Mean	Median
Quantity	1200	2.95	3.00
UnitPrice	1200	356.41	364.21
ItemsInCart	1200	5.49	5.00
TotalPrice	1200	1053.97	823.62

Outlier Analysis

Column	Outliers
Quantity	0
UnitPrice	0
ItemsInCart	0
TotalPrice	8

Key Observations

- Dataset contains 1200 rows and 14 columns.
- Mean and median were calculated for all numeric columns.
- Outliers were identified using the $1.5 \times \text{IQR}$ rule.
- TotalPrice: 8 potential outlier(s) detected.
- Quantity: 0 potential outlier(s) detected.
- UnitPrice: 0 potential outlier(s) detected.
- Total missing cells: 309.

Conclusion

The EDA converts the raw dataset into descriptive statistics and analytical findings, supporting identification of distributions, unusual values, and useful patterns for further analysis.
